Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>
int findFloor(int arr[], int low, int high, int x) {
    if (low > high) {
        return -1;
    }
    if (x < arr[low]) {
        return -1;
    }
    if (x >= arr[high]) {
        return arr[high];
    }
    int mid = low + (high - low) / 2;
    if (arr[mid] == x) {
        return arr[mid];
    }
    if (x > arr[mid]) {
        if (mid + 1 <= high && x < arr[mid + 1]) {
            return arr[mid];
        }
        return findFloor(arr, mid + 1, high, x);
    }
    return findFloor(arr, low, mid - 1, x);
}
int main() {
    int n, x;
    if (scanf("%d", &n) != 1) return 0;

    int arr[n];
    for (int i = 0; i < n; i++) {
        if (scanf("%d", &arr[i]) != 1) return 0;
    }
    if (scanf("%d", &x) != 1) return 0;
    int floorValue = findFloor(arr, 0, n - 1, x);
    printf("%d\n", floorValue);
    return 0;
}
```

	Input	Expected	Got	
✔	6 1 2 8 10 12 19 5	2	2	✔
